ROEQ CP300 Cart Pallet

The CP300 is developed to support internal logistics in industry and healthcare facilities where "lightweight" pallets are transported.

The basic functionality of the CP300 system is to perform automated internal pallet transport with the MiR100/MiR200.

CP300 is designed to transport pallets, and with the special TMOZ (Top Module Over Sized) the safety is incorporated into the design of the Top Module.

CP300 fits all types of pallet-based products, e.g. gitterboxes, plastic containers and different kinds of pallets.

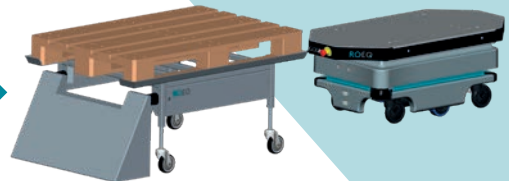

This is how the ROEQ CP300 works

The MiR100/MiR200 approaches the Docking Station.

MiR100/MiR200 delivers the CP300 in the Docking Station.

The MiR100/MiR200 drives off to solve other tasks.
